

SOLAR'S MOST TRUSTED

# REC: CERTIFIED FOR QUALITY

## REC WARRANTY

The best warranty is one you never use, but to support our high quality products, the REC ProTrust Warranty is a premium package that protects you in the rare case of a claim.

Exclusively offered by trained REC Certified Solar Professional installers, the REC ProTrust package gives you more savings, greater economic security, and more energy autonomy.

- PRODUCT** Covers panel defects and promises superior quality for at least 20 years. All panels are eligible for a **+5 year product warranty extension** as part of the REC ProTrust Warranty.
- PERFORMANCE** Ensures that REC panels perform exactly as expected, every year for 25 years. Higher warranted power and annual yield, enables greater ROI predictability.
- LABOR** Unique to the REC ProTrust Warranty, this gives added protection in the unlikely event of servicing being required.

The table below provides an overview of REC's leading warranty by system size:

REC warranty type	REC PROTRUST WARRANTY		REC STANDARD WARRANTY
Installer group	Exclusive to REC Certified Solar Professional installers		All installers
System size	<25 kW	25-500 kW	All
Product Warranty	25 years*	25 years*	20 years
Labor Warranty	25 years*	10 years*	0
Performance Warranty	Minimum power in year 1	Year 2-25 maximum annual degradation	Guaranteed % of power in year 25
REC Alpha panels	98.0%	0.25%	92.0%
REC N-Peak panels		0.5%	86.0%
REC TwinPeak (60-cell format)	97.5%	0.7%	80.7%
REC TwinPeak (72-cell format)		0.5%	85.5%

REC TwinPeak products not available in Germany.  
 \*Certain conditions may apply. Installations must be registered via REC SunSnap app or REC Certified Solar Professional Portal to be valid.

## QUALITY MANUFACTURING

REC products and production processes are certified according to multiple industry standards by independent third parties, solidifying the fact that REC meets the highest quality standards for a long-lasting product and performance:

**IEC 62941**  
Quality System for PV Module Manufacturing

**ISO 9001: 2015**  
Quality Management System

## QUALITY OF TESTING

REC uses its own test lab to ensure high quality during product development and as part of continuous quality review.

The test lab is certified by VDE to TDAP standards, underlining the high quality of test processes as well as REC's all-round exactitude in the measurement and the calibration of test equipment. This means that at every stage, REC products are tested to the highest levels of accuracy.

## ENVIRONMENT + SAFETY

The first consideration for REC is always to ensure the safety of its production for the environment, and health and safety for our customers and employees. To ensure all REC production facilities meet the highest standards, our factories have been certified to:

**ISO 14001: 2015**  
Environmental Management Systems

**OHSAS 18001: 2007**  
Occupational Health and Safety Management

## SALT MIST RESISTANCE

The higher concentration of salt in coastal environments increases the chance of discoloration and degradation in a solar panel. This can potentially lead to panel breakdown if not properly protected against salt mist.

All REC panels pass the IEC 61701 Severity Level 6 standard, ensuring the highest protection against environmental salt mist conditions.

## AMMONIA RESISTANCE

Ammonia is a caustic gas that can develop in livestock barns. In high concentration, it can cause a chemical reaction which leads to corrosion of surrounding objects and buildings, including solar panels.

All REC panels have passed the IEC 62716 test standard, which ensures resistance to high levels of ammonia concentration in the atmosphere.

## PID RESISTANCE

Potential Induced Degradation (PID) is a power loss phenomenon at system level caused by leakage currents and heightened by high voltages, temperatures, and levels of humidity.

By using unique technology, REC was one of the first manufacturers to ensure all of its panels were PID-free. Today, all REC panels pass an enhanced IEC 62804 PID certification, ensuring the highest level of resistance.

## 35 MM HAIL RESISTANCE

Hail can cause significant damage to solar panels, breaking the glass and other components which can lead to power loss.

REC panels are certified to IEC 61215, including the ability to resist the impact of hail stones up to 35 mm in diameter and 20.7 g mass. This far surpasses the resistance offered by most competitors of 25 mm diameter at 7.5 g.

## RESISTANCE TO FIRE

Fire is incredibly rare in solar panels, and is generally a result of poor installation practices or defective connections. To protect against this, REC certifies its solar panels to all relevant international and local ignitability standards, including:

- UL 790 (modified acc. to UL 61730)
- ISO 11925-2
- UNI 8457 & UNI 9174 (UNI 9177)

## CYCLIC WIND LOADS

Cyclones can cause incredible damage to buildings and turn common objects into dangerous projectiles.

To ensure safety in cyclone regions, REC certifies its panels to AS 4040.2 and NCC 2016 LHL at Australia's premier cyclone testing centre, guaranteeing thorough and comprehensive testing of the panels to ensure they can withstand the worst of conditions.

## DYNAMIC MECHANICAL LOAD

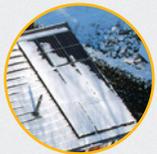

Strong winds, as well as other common environmental conditions, can have a major impact on the long-term performance of a solar panel.

REC certifies all of its panels to IEC 62782, which simulates the effect of strong winds and verifies a panel's high reliability under the different forces seen in real life weather conditions.

## NON-UNIFORM LOADS

A solar installation usually sees the panels installed on an angle. Testing of the panels however, is performed horizontally meaning the load distribution can affect a panel differently to testing.

For this reason, REC certifies its panels to the IEC 62938 standard. This determines a panel's continued high performance under the build-up of loads that are unevenly spread.

## TOP PERFORMER RATING

The annual PVEL independent panel testing program sees numerous solar manufacturers and their products put through a series of exacting tests.

Every year since 2016, REC has been rated as a Top Performer, demonstrating the lasting quality promise we make to our customers.
